Literary rozpoznawczych używa się do tworzenia nazw żubrów urodzonych w danej hodowli. Proponowane litery rozpoznawcze hodowcy wybierają spośród dotychczas nie zastrzeżonych i przedstawiają Redakcji *Księgi Rodowodowej Żubrów* do zatwierdzenia. Duże litery oznaczają nazwy żubrów linii białowieżskiej.

Appropriate distinctive letters are used to form names given to European bison born in a given breeding centre. Breeders should choose the distinctive letters they propose to use from among those not already reserved, and submit them to the Editing Committee of the *European Bison Pedigree Book* for approval and acceptance.

Capital letters indicate names of wisents of Białowieża-line

Przedmowa — Preface — Предисловие

The successful preservation of the European bison in the Białowieża Forest, on the borders of Poland and the U.S.S.R., as well as in zoos throughout the world, is a testament to the effects of co-operation between nations, of the kind which is actively promoted and supported by the International Union for Conservation of Nature and Natural Resources. I am therefore pleased and honoured to be given the task of introducing the present international studbook for the European bison, which I know will prove an essential tool for the successful husbandry and improvement of world stocks of this rare species.

Gerardo Budowski
Director General, IUCN

Pomyślna ochrona żubra w Puszczy Białowieskiej — na granicy Polski i ZSRR — jak również w ogrodach zoologicznych na całym świecie jest świadectwem efektów takiego rodzaju współpracy między narodami, jaką czynnie krzewi i popiera Międzynarodowa Unia Ochrony Przyrody i Jej Zasobów. Mam zatem wielką przyjemność i zaszczyt, iż powierzono mi zadanie napisania wstępu do obecnej międzynarodowej księgi rodowodowej żubra, która z pewnością okaże się istotnym narzędziem dla pomyślniej hodowli oraz poprawy światowego поголовia tego rzadkiego gatunku.

Gerardo Budowski
Dyrektor Generalny IUCN

Успешная охрана зубра в Беловежской Пушче — на рубеже Польши и СССР — как и в зоосадах всего мира, является свидетельством эффективности сотрудничества между народами, которые активно содействуют и поддерживают Международный Союз Охраны Природы и её Ресурсов. Следовательно мне представляет большое удовольствие и честь задание, написать введение к международной Родословной Книге Зубров, которая как я уверен, окажется существенным инструментом в успешном разведении зубров и улучшении мирового поголовья этого редкого вида животных.

Gerardo Budowski
Генеральный Директор МСОП

Wstęp

Prezentowany zeszyt, ukazujący się pod nazwą *Księga Rodowodowa Żubrów*, stanowi bezpośrednią kontynuację wydawnictwa *Księgi Rodowodowe Żubrów*. Niniejszy numer obejmuje okres zaległych pięciu lat: od dnia 1 stycznia 1965 do 31 grudnia 1969 r. Poczynawszy od 1970 r., *Księga* będzie publikowana w odcinkach rocznych.

Zmiany redakcyjne

Na życzenie hodowców, pragnących zamknąć opublikowaną dotychczas powojenną serię wydawnictwa, Redakcja zdecydowała się na wprowadzenie wraz z nową szatą graficzną — nową paginacji stronic, która będzie kontynuowana w rozpoczętej serii. Wprowadzone w tym zeszycie zmiany w układzie i formie graficznej *Księgi*, mają na celu dostosowanie wydawnictwa do aktualnej sytuacji w hodowli żubrów na świecie oraz ułatwienie orientacji w coraz liczniejszym materiale, publikowanym w *Księdze*.

Tabela: *Urzędowy rejestr żubrów czystej krwi urodzonych w latach 1965–1969* (s. 9–35) została podzielona na kolejne lata, wymieniane w tytule. Dlatego zrezygnowano z powtarzania roku przy dacie urodzenia. Nadal notuje się tu padnięcia żubrów, jeśli miały one miejsce w roku urodzenia.

Tabela: *Zmiany w hodowlach żubrów w okresie od 1.I.1965–31.XII.1969* (s. 36–52) prezentuje w kolejności numerów rodowodowych — padnięcia i wszystkie zmiany miejsca przebywania żubrów, zasze w okresie czasu, który obejmuje dany zeszyt. Nie obejmuje ona, wbrew dotychczasowej praktyce, zmian zaszych w wcześniejszym okresie i erraty.

Tabela: *Uzupełnienia i poprawki do rejestrów uprzednich* (s. 7–8) — spełnia rolę erraty i zawiera zarówno sprostowania błędów drukarskich, jak i zmian stanu, które winny być wprowadzone do poprzednich zeszytów *Księgi*. Informacje te uszeregowane są według kolejności numerów rodowodowych zwierząt. Wprowadzenie tego rozdziału ma na celu umożliwienie użytkownikom sporządzania korekty danych w posiadanym komplecie *Księgi Rodowodowej*. Pracę tę ułatwia podawanie stron, na których należy dokonać stosownej zmiany.

Tabela: *Spis wszystkich żyjących żubrów na dzień 31.XII.1969* (s. 53–74) — zawiera pełny spis zwierząt żyjących w hodowlach zamkniętych wraz z ich danymi rodowodowymi. Zrezygnowano przy tym z podawania pełnej daty urodzenia, ograniczając się do roku urodzenia, co wraz z numerem rodowodowym umożliwia odszukanie zwierzęcia w odpowiedniej tabeli urodzeń.

Ponadto wprowadzono:

Alfabetyczny spis hodowli (s. 75–77) z oznaczeniem stron, gdzie hodowla ta jest wymieniana w tabelach *Księgi*.

Zestawienie: *Światowy stan żubrów czystej krwi* (s. 1–6) w postaci statystyki ilościowego stanu poszczególnych zamkniętych i wolnych hodowli żubrów z rozbićm na pleć (samce, samice), podsumowanej zestawieniem zbiorczym.

Na wewnętrznej stronie okładki *Księgi* podawać się będzie do wiadomości hodowców stale aktualizowane zestawienie liter rozpoznawczych, przyznanych poszczególnym hodowlom przez Redakcję oraz zasady przesyłania przez właścicieli żubrów niezbędnych informacji o zwierzętach na użytek Redakcji *Księgi Rodowodowej*.

We wszystkich zestawieniach z wyjątkiem tabel: *Zmiany w hodowlach żubrów* oraz *Uzupełnienia i poprawki do rejestrów poprzednich*, przyjęto zasadę alfabetycznej kolejności uszeregowania nazw krajów (nazwy państw w języku angielskim), zaś w obrębie kraju — według nazw miejscowości (w wersji oryginalnej), gdzie trzymane są żubry. Wyjątek stanowią hodowle radzieckie, które zostały ustawione alfabetycznie według nazw własnych. Nie odnosi się to do radzieckich ogrodów zoologicznych, gdzie występują nazwy miast.

Ogrody zoologiczne oznaczono literami ZOO przy nazwie miasta. Wybrano je w zasadzie na podstawie spisu, zamieszczonego w „International Zoo Yearbook” vol. 10., The Zoological Society of London, 1970.

Hodowle wolne wyróżniono wersalikami.

Wszystkie nazwy żubrów pisane w oryginale alfabetem cyrylickim (hodowle bułgarskie i radzieckie), wydrukowano alfabetem łacińskim, stosując zasady transliteracji ISO. Powstałe w ten sposób niezgodności nazw w porównaniu z poprzednimi zeszytami *Księgi* są do wyjaśnienia w oparciu o numery rodowodowe.

Jedynym wyjątkiem od przyjętej zasady jest transliteracja nazw żubrów, wywodzących się z hodowli Beloveżskaja Pušča i powstałych ostatnio hodowli pochodnych. Zamiast prawidłowej formy „Be...” pozostawiono dotychczasowe litery rozpoznawcze „Bye...” dla odróżnienia od hodowli w Berlinie Zachodnim.

Nazwy żubrów utworzone przez hodowców niezgodnie z przyznanymi literami rozpoznawczymi, podano w nawiasach (np.: Voden — Bułgaria).

Zasady rejestracji żubrów

Rejestracji w *Księdze* podlegają wyłącznie żubry czystej krwi, zarówno linii białowieskiej, jak i białowiesko-kaukaskiej. W zasadzie wszystkie zwierzęta powinny posiadać kompletną dokumentację rodowodową. Jednakże sporadycznie zdarzają się w hodowlach zamkniętych zamiany zwierząt podczas wspólnego trzymania w stadzie hodowlanym, lub też staje się niemożliwe dokładne ustalenie rodziców cieląt. Postanowiono zatem, że w *Księdze* mogą być rejestrowane żubry z niepełnym rodowodem, a wyjątkowo także bez rodowodu. Przypadki takie rozpatrywane będą indywidualnie, przy czym wymaga się pisemnego oświadczenia hodowcy, gwarantującego czystość krwi hodowanych żubrów. Zamiast imienia notuje się wówczas BISON BONASUS (linia białowieska) lub Bison bonasus (linia białowiesko-kaukaska). W przypadku pomylenia zwierząt w grupie żubrów czystej krwi zachodzi także konieczność anulowania rodowodu tych zwierząt, ponieważ nie może być udowodniona identyczność ich rodziców.

W niniejszym zeszycie powstała konieczność dokonania takich zmian w stosunku do żubrów:

F 1418 ARANDA

F 1419 ARCHEOLA

F 1420 ARGENTA

z ZOO Amsterdam, które zostały pomieszczone w okresie wspólnego wychowu w młodości, oraz w stosunku do żubrów:

M 1482 BYEMOL

M 1498 BYERČIK

M 1488 BYEZIZVESTNYJ

M 1502 BYEDNYJ

M 1491 BYEZUMNYJ

M 1511 BYEŽANIEC

które zostały pomyłone podczas wspólnego pobytu w cyrku w Moskwie (Moskwa — Goscirc).

W kilku innych przypadkach zarejestrowano żubry z niepełnym rodowodem.

Począwszy od bieżącego zeszytu, przyjęto jako zasadę, że w tabelach nie będą rejestrowane żubry przebywające aktualnie w hodowlach wolnych. Jako hodowle wolne traktuje się te hodowle, w których zwierzęta żyją swobodnie w kompleksie leśnym i podlegają jedynie ograniczonym zabiegom hodowlanym ze strony człowieka. Kojarzenie w tych warunkach przebiega w sposób nie kontrolowany i genealogia urodzonych sztuk jest nie do ustalenia. Hodowle takie istnieją dotąd jedynie w Polsce i ZSRR. W *Księdze* stan zwierząt w tych hodowlach podawany jest jedynie ilościowo, w miarę możliwości w rozbiciu na płeć, w zestawieniu: *Stan liczbowy żubrów czystej krwi*.

W niniejszym zeszycie pominięto w tabelach wszystkie żubry wykazywane dotychczas w hodowlach wolnych oraz spisano ze stanu wszystkie zwierzęta przesiedlone do hodowli wolnych w okresie 1965–1969. Wyjątek stanowi hodowla: PUSZCZA BORECKA (Polska), z której w wyniku reorganizacji, żubry wróciły do hodowli zagrodowej w okresie sprawozdawczym przy zachowaniu pełnej identyfikacji wypuszczonych osobników. Również rodowody cieląt urodzonych na wolności mogły być dokładnie ustalone przez hodowcę.

Ze spisu hodowli wolnych usunięto następujące hodowle w ZSRR:

ALMA ATINSKIJ ZAPOVEDNIK (Alma-Ata zapovednik)

HOPĚRSKIJ ZAPOVEDNIK (Nowochopierski)

KAVKAZSKIJ ZAPOVEDNIK (Kisha, Kaukaz)

MORDOVSKIJ ZAPOVEDNIK (Tiemnikow)

NALČIKSKOE LESO-OHOTNIČ'E HOZJAJSTVO (Nalczyk)

w których żubry czystej krwi przebywają na swobodzie wraz z mieszkańcami. Osobniki te nie są obecnie ujmowane ani w tabelach, ani w zestawieniach ilościowych. Żubry przesiedlone do tych hodowli w okresie 1965–1969 zostały zdjęte z ewidencji i w tabeli *Zmiany w hodowlach...* oznaczono je gwiazdką.

Rozwój hodowli wolnych żubrów czystej krwi spowoduje niebawem sytuacje przesiedlania zwierząt z hodowli wolnych do hodowli zamkniętych. Przyjęto zatem zasadę, że procedura włączania żubrów ze stad wolnych do hodowli kontrolowanych będzie połączona z wpisaniem zwierzęcia do *Księgi Rodowodowej*. Po zagwarantowaniu przez hodowcę czystości krwi żubrów przebywających na swobodzie, przesiedlane zwierzęta otrzymają numery rodowodowe właściwe dla roku włączenia do ewidencji oraz nazwy, zgodnie z przyznanymi literami rozpoznawczymi.

Współpraca z hodowcami i posiadaczami żubrów

Redakcja zbiera materiały do *Księgi Rodowodowej Żubrów* na zasadzie bezpośrednich kontaktów listownych ze wszystkimi właścicielami żubrów. Zasady utrzymywania kontaktów z Redakcją zostały podane oddzielnie (patrz 3 s. okładki). Przestrzeganie ich (zgłaszanie zmian bieżących i przysyłanie corocznie zbiorczych zestawień stanu) — zapewni każdemu posiadaczowi żubrów czystej krwi ujmowanie jego hodowli w tabelach *Księgi Rodowodowej*. Nie nadsyłanie materiałów do Redakcji spowoduje usunięcie z ewidencji zwierząt posiadanych przez te hodowle. Hodowle, które nie nadesłały materiałów do niniejszego zeszytu zostały wyróżnione gwiazdką w tabeli: *Spis wszystkich żyjących żubrów na dzień 31.XII.1969 r.* W razie nie nadesłania danych zostaną one pominięte w zeszycie za 1970 rok i w następnych.

Umieszczenie żubra wraz z danymi rodowodowymi w *Księdze Rodowodowej Żubrów* — stanowi dla ogółu hodowców jedyną gwarancję czystości krwi zwierzęcia. Dlatego Redakcja apeluje do wszystkich hodowców żubrów o dostarczanie udokumentowanych i sprawdzonych informacji rodowodowych. Wszelkie przypadki niepewne, lub niedostatecznie wyjaśnione i niezgodne z dokumentacją posiadaną przez Redakcję — będą rozstrzygane na odpowiedzialność Redakcji.

Redakcja nie przewiduje zaopatrywania hodowców w karty identyczności, uznając za wystarczające posługiwanie się w tym celu danymi rodowodowymi publikowanymi w *Księdze*.

*

Oddany do rąk użytkowników kolejny odcinek *Księgi Rodowodowej Żubrów* powstawał w okresie reorganizacji zasad pracy Redakcji i nawiązywania bezpośrednich kontaktów z posiadaczami żubrów w skali światowej. Przygotowanie niniejszego zeszytu było utrudnione także ze względu na zaległy i dłuższy niż zwykle okres czasu, objętego rejestracją i wynikłe stąd opóźnienia oraz błędy w nadsyłanych przez hodowców materiałach.

W tej sytuacji nieocenioną pomocą były materiały zgromadzone w latach 1965–1967, a także częściowo jeszcze w 1968 r. przez wieloletniego współpracownika Redakcji — dr Ernę Mohr. Za przekazanie Redakcji tych i wcześniejszych materiałów, stanowiących bezcennej wartości dokumenty z dziejów restytucji żubra — niech nam będzie wolno wyrazić szczerą wdzięczność Jej siostrze — pani Mecie Schaubach.

Dane odnoszące się do wszystkich hodowli radzieckich Redakcja otrzymała w formie zbiorczych zestawień, które zostały następnie wykorzystane do przygotowania zeszytu. Za materiały te odpowiedzialny jest w całości długoletni współpracownik Redakcji — Dr Michael Zablocki (ZSRR), Członek Grupy Żubra IUCN. Redakcja wyraża mu podziękowanie za pomoc okazywaną w uzyskiwaniu całości danych o żubrach w Związku Radzieckim.

Jan Raczynski

Introduction

The publication presented here, appearing under the name *European Bison Pedigree Book*, forms the direct continuation of the *Pedigree Book of the European Bison*. This number covers the five-year period not previously dealt with; from January 1st 1965 to 31st December 1969. As from 1970 the *Pedigree Book* will be published in the form of a year book.

Editing changes

Following requests received from breeders who wish to complete and close the postwar series of publications which have so far appeared, the Editors have decided to introduce, together with the new layout, new pagination which will be continued in the series now begun.

The changes introduced in the present number in the layout and typography of the Book have been made in order to adapt the publication to the current situation in world European bison breeding and to facilitate reference to the increasing volume of material published in the *Pedigree Book*.¹

The table: *Official register of pure-bred European bison* (pp. 9-35) has been divided into the consecutive years given in the title, and therefore the year has not been repeated in the dates of birth given. Deaths of European bison taking place during the year of birth are still given here.

The table *Changes in European bison breedings 1st January 1965-31st December 1969* (36-52) gives, in order of pedigree numbers, all deaths and all changes in place of stay of European bison taking place during the period covered by the number. It does not yet include changes which took place during the earlier period or errata.

Table: *Additions and corrections to former lists* (7-8) — acts as an errata and also includes corrections of printing errors, and changes in head of wisent which should have been entered in previous numbers of the *Book*. This information has been arranged in order of pedigree numbers of the animals'. The purpose of this special section is to make it easier for users to make the necessary corrections to data in the numbers of the *Pedigree Book* in their possession. Further assistance is provided by giving the numbers of the pages on which the required correction is to be entered.

Table: *List of all living European bison on 31 December 1969* (pp. 53-74) contains a full list of animals living in enclosed breeding centres, together with their pedigree data. The full date of birth has not been given here, only the year of birth which, together with the pedigree number, permits to be found the animals in the appropriate table of births.

The following have also been introduced:

Owners index (pp. 75-77), giving the pages on which the given centre is mentioned in the tables of the *Pedigree Book*.

World register of pure-bred European bison living on 31 December 1965-1969 (pp. 1-6) — in the form of statistics of the numbers of European bison in enclosed and free-living breeding centres, giving the sexes separately (males and females), summed up by a joint list. On the inside of the cover of the *Book* there will be a list, constantly brought up to date, of the distinctive letters allocated to the various breeding centres, and details of the way in which European bison owners should send in essential information concerning the animals for the use of the Editing Committee of the *Pedigree Book*.

In all lists (except for the tables of *Changes in European bison breedings* and *Addition and corrections to former lists*) we have adhered to the principle of alphabetical order for names of countries (English names of countries), and within the given country in alphabetical order for names and places (original names) where European bison are kept. An exception to this is formed by the Soviet breeding centres which have been arranged in alphabetical order according to their own names. This does not apply to Soviet zoological gardens, for which the name of the town is given.

Zoological gardens are marked with the letters ZOO by the name of the town and they have been selected in principle on the basis of the list given in the "International Zoo Yearbook", vol. 10, The Zoological Society of London, 1970.

Free-living breeding centres have been distinguished by capital letters.

All the names of European bison written in the original Cyrillic alphabet (Bulgarian and Soviet breeding centres) have been printed according to the Latin alphabet, using the I.S.O. principles of transliteration. Differences in names arising in this way from those in previous numbers of the *Book* can be solved by means of pedigree numbers. The only exception to the principle accepted is transliteration of names of European bison originating from the Belovežskaja Pušča breeding centre and the recently established derivative centres. Instead of the correct form "Be...", the distinctive letters so far used "Bye..." have been retained in order to distinguish them from the centre in West Berlin.

Names of European bison given by breeders not in conformity with the distinctive letters allocated are given in brackets (Voden — Bulgaria).

Principles for registering European bison

Only pure-bred European bison, of either the Białowieża or Białowieża-Caucasian lines, can be registered in the *Book*. In principle all the animals should possess a complete documentation of their pedigree. It occasionally happens in enclosed breeding centres, however, that animals are mistaken when kept together in a breeding herd or it may become impossible to establish exactly the calves' parentage. It has therefore been decided that European bison with an incomplete pedigree, and exceptionally also without a pedigree, can be registered in the *Book*. Such cases will be considered individually and a written declaration from the breeder guaranteeing that the given European bison are pure-bred is required. Instead of a name an entry is then made of BISON BONASUS (Białowieża line) or Bison bonasus (Białowieża-Caucasian line). In cases of mistaking animals in a group of pure-bred European bison it becomes essential to annul the animals' pedigree, as the identity of their parents cannot be proved.

In the present number it has proved necessary to make changes of this kind in relation to the following animals:

F 1418 ARANDA
F 1419 ARCHEOLA
F 1420 ARGENTA

from Amsterdam Zoo, which became mixed during the period they were reared together as young animals, and the following animals

| | |
|----------------------|------------------|
| M 1482 BYEMOL | M 1498 BYERČIK |
| M 1488 BYEZIZVESTNYJ | M 1502 BYEDNYJ |
| M 1491 BYEZUMNYJ | M 1511 BYEŽANIEC |

which became mixed during the time they spent together in a circus in Moscow (Moskva — Goscirik).

European bison with incomplete pedigrees have been registered in several other cases.

Starting with the present number it has been accepted as a principle that European bison currently living in free-living centres will not be registered in tables. Centres are considered as free-living in which the animals live in freedom in a forest area and are subject only to limited interference with breeding by man. Mating under these circumstances is uncontrolled and the genealogy of the animals born cannot be established. Breeding of this kind has so far existed only in Poland and the Soviet Union. Only the numerical state of these centres, divided as far as possible into the sexes, in the numerical list of world head of European bison has been given in the *Book*.

In the present number all European bison hitherto shown in free-living breeding centres have been omitted and all animals transferred to free-living conditions during the period from 1965–1969 have been deleted from lists of head of European bison. An exception to this is formed by the centre at PUSZCZA BORECKA (Poland) from which, owing to reorganization, the animals returned to enclosed breeding

conditions during the period of the report, full identification of all released individuals being maintained. Pedigrees of calves born under free-living conditions could also be accurately established by the breeder.

The following centres in the Soviet Union have been removed from the list of free-living breeding centres:

ALMA-ATINSKIJ ZAPOVEDNIK (Alma-Ata zapowiednik)

HOPĚRSKIJ ZAPOVEDNIK (Nowochopiersk)

KAUKAZSKIJ ZAPOVEDNIK (Kisha, Kaukaz)

MORDOVSKIJ ZAPOVEDNIK (Tiennikow)

NALČIKSKOE LESO-OHOTNIČ'E HOZJAJSTVO (Nalczyk)

in which pure-bred European bison live in freedom together with hybrids. These individuals are not now included in either tables or numerical lists. Animals transferred to these centres have been removed from the records and indicated by a star in the table of changes.

The development of free-living centres for pure-bred European bison will soon bring about situations in which animals are transferred from free-living to enclosed centres. The principle has therefore been adopted that the procedure of transferring European bison from free herds to controlled breeding centres cause introduction of the animal in the *Pedigree Book*. After obtaining a guarantee from the breeder that the European bison living in freedom are pure-bred the transferred animals will be given pedigree numbers appropriate for the year of introduction in the records and names in accordance with the distinctive letters allocated.

Co-operation with European bison breeders and owners

The Editors accumulate material for the *European Bison Pedigree Book* on the principle of direct correspondence with all owners of these animals. The principles for maintaining contacts with the Editors have been given separately (see page 3 of cover). Strict adherence to these principles (reporting current changes and forwarding annual joint lists of head of the European bison) assures every breeder of pure-bred European bison that his centre will be included in the tables of the *Pedigree Book*. Failure to forward material to the Editing Committee results in removal from the records of the *Book* of the animals held in the given centre. Breeding centres which failed to forward material for the current number have been marked by a star in the table of head of animals for the end of 1969. If no further data are sent in they will be omitted in the 1970 and subsequent numbers.

Inclusion of a European bison, together with pedigree particulars, in *The European Bison Pedigree Book* constitutes the only guarantee for all breeders that an animal is pure-bred. On this account the Editing Committee appeals to all European bison breeders to supply documented and checked pedigree information. All uncertain cases, or cases insufficiently explained and at variance with documentation in the possession of the editors will be settled at the editors' discretion, up to and including deletion of the given animal from the records.

The Editing Committee does not envisage supplying breeders with identity cards, as it is considered sufficient to use the pedigree date published in the *Pedigree Book* for this purpose.

*

This current part of the *European Bison Pedigree Book*, now supplied to its users, was prepared during the period of reorganization of the working principles of the Editing Committee and of establishing direct contacts with European bison owners all over the world. Preparation of this number was also more difficult on account of the lengthy period, longer than usual, covered by registration and the consequent delays and errors in material sent in by breeders.

In these circumstances the material accumulated from 1965-1967, and also partly in 1968, by Dr. Erna Mohr, who collaborated with the Editors for very many years, was of invaluable service. We should like to express our warm gratitude to her sister, Mme Meta Schaubach, for supplying the Editors

with this and earlier material consisting of documents of inestimable value on the history of the restitution of the European bison.

The editors received data referring to all Soviet breeding centres in the form of collective lists, which were next used in the preparation of the number. Dr. Michael Zablocki (USSR), member of the European Bison Group of I.U.C.N., who has for many years cooperated with the Editing Committee, has provided the whole of this material. The editors would like to tender their thanks to him for all the help given in obtaining the whole of the data on European bison in the Soviet Union.

Jan Raczyński

* Hodowle, które nie nawiązały kontaktu z Redakcją. Stan żubrów w tych hodowlach należy traktować jako nie potwierdzony.

* Indicates breeding centres which have not contacted the Editors. The head of European bison in these centres must be regarded as unconfirmed.

Hodowle wolne wyróżniono wersalikami.

Free-living breedings have been distinguished by capital letters.

To all European bison breeders:

The Editing Committee of the European Bison Pedigree Book is the central organ accumulating and recording information on the current state of pure-bred European bison from all over the world for the use of all breeders and owners. Registration of European bison on a world scale is the continuation of the idea represented by the International Society for the Protection of the European Bison. The Pedigree Book is intended to exercise control over the purity of breed of European bison in different parts of the world and to provide information on the numbers of these animals obtained by breeding for the purpose of restituting the species.

These aims can only be achieved if close co-operation is maintained between all interested parties — breeders and owners of pure-bred European bison — on an international scale. Information sent in by breeders must be reliable and punctual in order to permit regular publication of data in the form of successive numbers of the European Bison Pedigree Book.

The Editing Committee request all breeders and owners of European bison for the following information:

— current statement (on post cards — European bison information card) of any changes in the head of animals at their breeding centre. Exact date of birth, death, despatch or receipt of European bison should be given. When an establishment is moved the exact postal address of the new breeding centre should be given; in the event of the animal's death — the cause should be stated.

— forwarding in January of each year a completed list of all European bison owned during the preceding year. This list should give in order of pedigree numbers all European bison owned during the period from January 1st to December 31st of the year covered by the report. The exact date of change should be entered by the name of any animals either added to records during this period or removed from the breeder's list.

Please note that:

— still births and abortions must also be registered

— in the case of sale of an European bison the date of transfer of the animal, and not the date of the actual transaction, should be given.

Data published in the European Bison Pedigree Book form the sole guarantee for breeders of European bison as a whole of the purity of the species of animals owned. If erroneous or insufficiently documented information is supplied, or the breeder fails to maintain contact with the Editors, this will result in the given breeding centre being omitted and removal of the European bison kept there from the records of the European Bison Pedigree Book.

All data on European bison should be sent to:

European Bison Pedigree Book
